* = Actual measurements because these animals are out of the set standards set for Days of Age.

Ratios that are **BOLD** are ratios on ET calves. These ratios are compiled by Bieber Red Angus Ranch based on the contemporary grouping of the recipient dams. The Red Angus Association has chosen not to use the ultrasound data from these animals, even though other breed associations have chosen to use this data to adjust EPD's to reflect the true genetic merit of these animals. We have not adjusted the EPD's, so they remain the parental estimates that all Embryo Transplant animals get, but by ratioing these bulls, you get some indication whether a bull is better than or lower than his EPD for that trait.
